

# Bash Scripts

1- Write a bash script that collects two numbers from the user and then prints a message if these two numbers are smaller or greater than 100.

2- Write a bash script that reads a temperature in Fahrenheit and converts it to Celcius

3- Using the **find**, **du**, and **sort** commands, please write a script that finds the largest 10 files in a directory.

- You are free to use any additional commands
- Please use the **man** command or Google to understand how to use these commands
